INTRODUCTION

In this booklet, you will find common objects in the sky that are easily viewable in the night sky. This basic (pictorial) guide is for the curious person who wishes to observe the night sky without the aid of a telescope or binoculars. While such objects are helpful, the only tools needed are your eyes and an area away from light pollution and minimum cloud cover.

Enjoy!

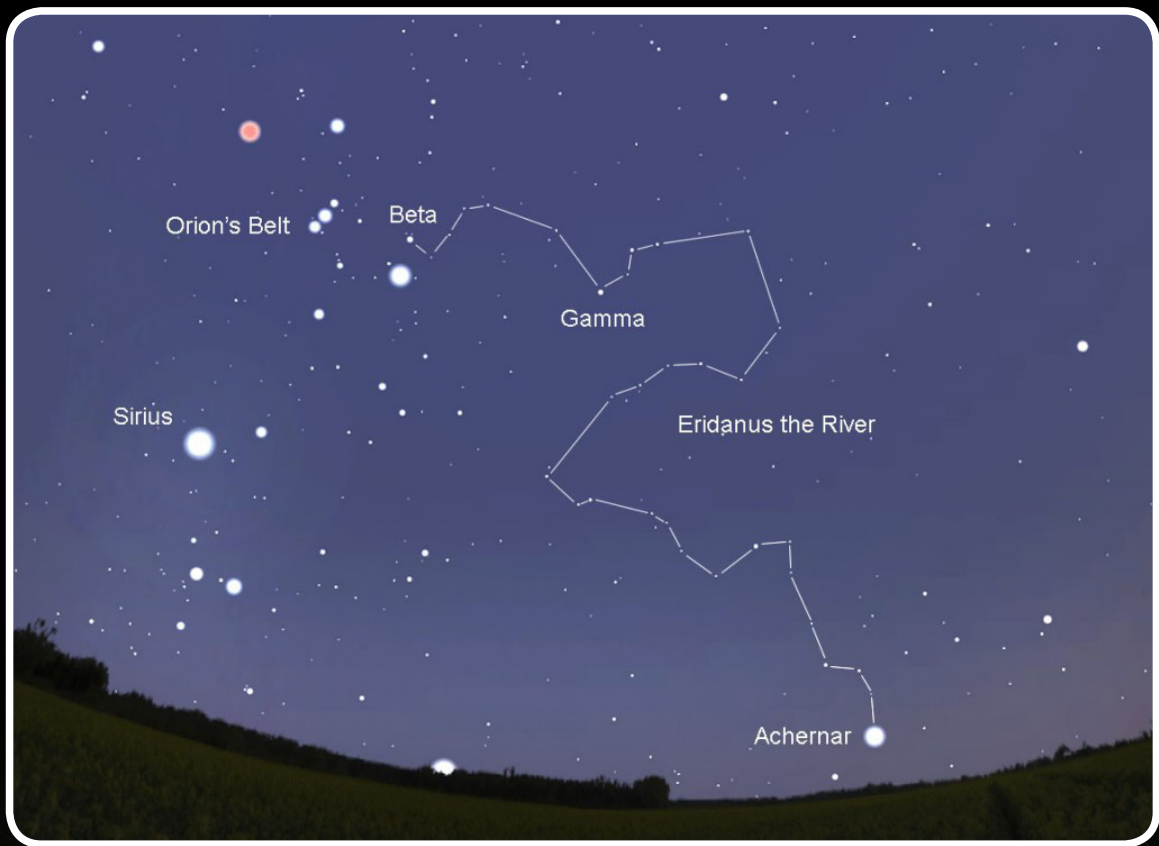

01 moon

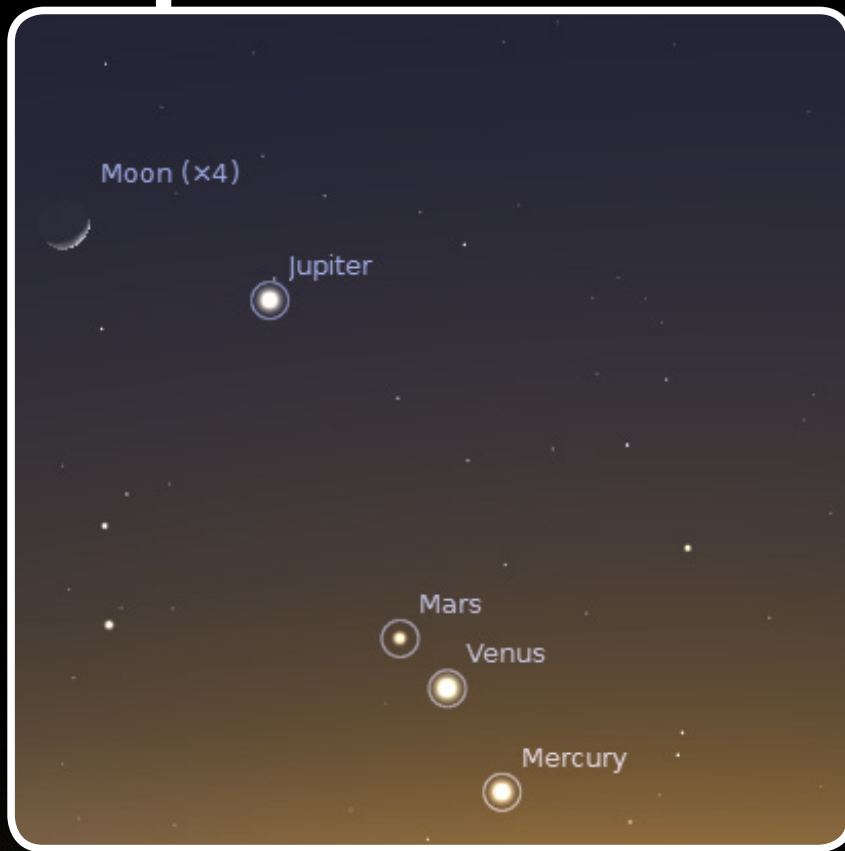

Phases of the moon during the lunar eclipse.

02 stars

03 planets

04 satellites

International Space Station traverses the moon.

05 comets

Perseid's meteor shower occurs during the months of July and August.
